

Data integrity & compliance

Leave no room for human error by delegating visual data capture to LabEye

Enhanced GMP compliance

Improved data accuracy and reliability.

Data flow is consistent and trustworthy.

100% of data captured by Lumi is traceable and accountable.

Lumi logs are detailed enough to be used as a single source of truth during audits & inspections.

Again, if anything is questionable or requires an investigation, video stream recordings are rock-solid proof of any event's circumstances.

Real-time automated data capture ensures that nothing is forgotten, misinterpreted or simply described wrong.

0% data loss is the most solid basis of data integrity – whether things go wrong or right, everything is logged and reported with visual proof and accurate timestamps.

Video stream recordings are perfect for data verification and violation investigations, as everything is captured "as is".
