

# Free scientists from admin

Lumi focuses on monitoring and reporting while you get to focus on moving science forward

**30%**

**Data capture burden**

On average, 30% of lab time is spent on experiment data capture

**100%**

**Of data capture can be taken care of by Lumi**

Helping to focus on what's important to move science forward

## Better, fewer experiments

Detailed data analysis provides comprehensive understanding of experiment structure and outcomes, allowing to reduce the number of experiments required to achieve the result.

Real-time monitoring and smart notifications ensure the increased quality of any experiment, identifying deviations or abnormalities as soon as they appear.

Pattern and trend recognition enable process optimization and efficient, "corner-cutting" project planning.

100% of admin work during lab experiments could be delegated to Lumi.

You don't need to worry about forgotten or misinterpreted events anymore – everything is captured at the exact moment when it happens.

Advanced lab monitoring – you don't need to witness an event to have a record of it, so no more spending hours watching a reaction unfold.
