

Plug-and-play innovation

Use the power of AI to support science and benefit R&D from the ground up

Plug-and-play innovation delivering value from day one

Lumi's installation takes minutes (could be hours if network settings are complicated) and it starts delivering results right away. You can forget about months-long implementation cycles or worrying about tech compatibility.

Lumi LabEye can be installed anywhere in the lab, it is comfortable with high and low temperatures and any kinds of hazardous environments.

Visual lab intelligence platform is a secure & compliant cloud-based solution, providing an instant access to your lab data from anywhere in the world, thus improving collaboration between distributed teams.

Streamlined data capture allows to cut admin time in a lab setting and re-purpose expensive FTEs.

Automated real-time monitoring optimises performance & scheduling, allowing to parallel experiments and only intervene or adjust when a human input is required.

Enhanced data analysis provides deeper insights into experiment results & processes.
